

Electromagnetic Control Impulse Semi-Automatic Foot Operated Sealer

WH-Series

features

- *Electromagnetic control*
- *Consistent sealing & congealing time*
- *Impulse sealing*
- *Sealing activated with foot pedal switch*
- *Rectangular stand for stability*
- *Plug-in electronic timer*
- *All metal construction*
- *No warm up time*
- *Sealing jaw will opens when seal is done*

WN-450S

This sealer is ideal for high volume poly bag sealing and other thermoplastic sealing. The unit is capable of 15-20 seals per minute. It also allows the user to keep both hands free for quicker and more accurate sealing.

The seal width is 2.7mm and materials up to 18" wide and 10 mil total thickness can be sealed. It is equipped with 2 plug-in timers, which automatically control the sealing time and congealing time needed for different materials. Once the timers are set, the sealer will give a consistently flat seal.

Operating Instructions:

- 1) Insert the plastic bag between the sealing jaws & press on the foot pedal switch to activate the sealer.
- 2) The sealer will go through sealing and congealing process.
- 3) The sealing jaw opens automatically when seal is done.

**Sealing time and congealing time are electronically controlled so consistency can be maintained.*

**No human judgment is needed.*

** All the different variables such as pressure and timing that affect the appearance of the seal are eliminated.*
